Project #2 Proposal: Extract, Transform, Load Netflix Database

Team Members: Emmanuela, Nathaniel, Khadra

Project Description:

We have decided to create a Netflix Movies, TV Shows and Credits Database using SQL and Pandas. We will be using a relational database to create meaningful information by joining the tables using two csv files.

Tools and Programmes

We will be using:

1. Pg Admin (relational database)
2. Pandas
3. SQLalchemy

Data Sets Reference:

Netflix Credits CSV: [Netflix TV Shows and Movies | Kaggle](#)

Netflix Titles CSV: [Netflix TV Shows and Movies | Kaggle](#)
